RESEARCH PUBLICATION AND ACADEMICS

SIGIR Conference 2022- On Survivorship Bias in MS MARCO	(Co-author: Dr. Sean MacAvaney)
University of Glasgow, Scotland, UK — MS, Data Science	GRADE: A (Jan 2021 - Jan 2022)
IET-DAVV, Indore, MP, India — BE, Computer Science Engineering	GRADE: 83.5% (Jul 2012 - Apr 2016)

SKILLS & COURSES

- Data Science | Machine Learning | Data Transformation, Harvesting and Visualization | Cloud Deployment
- Libraries:** Scikit-Learn, PyTorch, TensorFlow, Pandas, NumPy, Matplotlib, Tidyverse, Dplyr, Rvest, RSelenium
- Languages:** R, Python, SQL | **Tools:** AWS Sagemaker, Tableau, Apache Superset, Azure Databricks, Snowflake
- Generative AI | RAG | Feature Engineering | EDA | Time Series Forecasting | NLP | Recommender Systems

EXPERIENCE

Reveleer Digital Solutions / IMMO Capital — Sr. Data Operations Analyst (Jun 2023 - Present)

- Sr. Data Operations Analyst, Reveleer Digital Solutions (Mar 2025 - Present)
- Analyzed large-scale US medical insurance datasets using statistical modeling and exploratory data analysis (EDA) to uncover key business drivers and optimize decision-making.
 - Engineered and automated scalable ETL workflows, integrating data validation, transformation, and monitoring to ensure high data quality and reliability.
 - Monitored Critical Data Operations, including tasks such as daily file loads by customers, ensuring customer satisfaction and business efficiency.

- Data Analytics Engineer, IMMO Capital (Jun 2023 - Feb 2025)
- Led the migration of customer and vendor data into Oracle NetSuite by handling the entire data lifecycle — including extraction from legacy systems, thorough data profiling and analysis, complex transformation to standardized formats, and rigorous data reconciliation to ensure integrity and accuracy.
 - Developed an asset management visualization platform using Apache Superset, functioning as the central repository that consolidates essential investors, rentals, and customer data for stakeholder decision-making.
 - Automated data extraction and cleaning workflows, accelerating business deliverables for over 50,000 transactions using DBT, Snowflake, and Apache Airflow.
 - Conducted comprehensive analytics for property and resident markets, delivering actionable insights across assets, property, and resident management domains to support strategic decisions and optimize performance.

- Cox Automotive, UK — Associate Data Scientist (Apr 2022 - Jun 2023)
- Built a centralized data dashboard that extracted, transformed, and visualized 25 key UK economic indicators, including historical trends for the past 20 years and predictive analytics for the next 3 years.
 - Provided data-driven solutions to multiple business units (Auction Services, International Strategy Team, Financial Services, etc.) by applying advanced statistical analysis and machine learning techniques.
 - Built and maintained scalable data pipelines for preprocessing and feature engineering, ensuring clean datasets for modeling. Optimized and deployed machine learning models through algorithm selection, testing, and hyperparameter tuning to deliver accurate predictive insights.
 - Developed a data extraction framework to harvest market intelligence from 5 car auction competitors, enabling improved pricing strategies and informed stakeholder decisions.
 - Deployed a time series forecasting ARIMA model leveraging historical data on electric vehicles in the UK to predict the projected volume of electric vehicles on UK roads over the next decade (95% strategic accuracy).

- Accenture, India — Senior Automation Engineer (May 2016 - Feb 2021)
- Orchestrated end-to-end automation of data validation and web application testing using Java, Selenium, and analytics-driven frameworks, achieving 100% automated coverage for critical banking applications.
 - Managed a cross-functional team, delivered technical training on test data generation, statistical analysis, and testing pipelines, and organized project-wide knowledge sharing sessions to boost data-centric innovation.
 - Collaborated on-site with German stakeholders, leveraging exposure to data-driven QA methodologies and global best practices in high-volume data environments.

KEY ACADEMIC/ SELF PROJECTS

Generative AI – Cold Email Generator with LangChain, Groq, Streamlit	(Jan 2026)
Property and Resident Analytics Platform using Python, SQL, Snowflake, DBT, Airflow	(Dec 2025)
Dashboard of United Kingdom Economic Indicators using R, Azure Databricks	(Jan 2023)
Image Classification Using Facial Recognition using OpenCV and AWS	(Nov 2021)

LEADERSHIP & ACHIEVEMENTS

- Mentored business and non-technical teams to enhance data-driven decision-making. (IMMO Capital, 2024)
- “THE SPIRIT OF COX” award for creating data extraction framework for car auction data. (Cox Automotive, 2023)
- “STAY AWESOME AWARD”, “POLE POSITION AWARD” for creating a time series forecasting model which predicted electrical vehicles sales in the UK over the course of the next 10 years. (Cox Automotive, 2022)
- “PERFORMER OF THE SPRINT” award for leading a team of engineers and successfully releasing the segment ‘Investment Advice’ for Commerzbank GmbH without any production issues. (Accenture India, 2018)

HOBBIES & INTERESTS

- Book Reading, Photography, Travelling, Socializing, and Cooking.
- Delving diverse ideas and topics to satisfy my curiosity and gaining a richer perspective on life.
